

ACTIVE ON-DEMAND EXPANDS TRANSPORTATION MANAGEMENT OPERATIONS

*Four New Divisions Meet Needs of
Growing Contractual Client Base*

Belleville, MI, January, 2008 - - Active On-Demand, a global provider of on-demand freight transportation management services, recently increased its scope to include four separate operating divisions: Active PTM, Active Aero Charter, Active Surface Management, and Active Global Solutions.

According to Christopher Healy, President and CEO of its parent company Active Aero Group, the expansion enables Active On-Demand's clients to select the most expeditious and efficient modes of transport for on-demand shipments worldwide.

Based in Belleville, MI, Active On-Demand is a non-asset based subsidiary of Active Aero Group. It provides clients with innovative, exclusive technology systems that optimize mode, carrier, and service execution of ground expedite, air cargo, and air cargo charter services that are vital to their supply chains and production operations.

Healy says the expansion is in response to the company's growing base of global clients who require web-based multi-mode transportation management systems that provide transaction visibility across all modes. "The expansion of Active On-Demand," says Healy, "is a major step toward our goal of becoming the preeminent provider of global on-demand transportation management services. It enables us to seamlessly integrate our products with our clients' supply chain and production management schedules throughout the world."

Healy also states that the Active PTM operating division delivers exceptional value by optimizing time, cost, and quality on every shipment. The business model provides on-demand mode management utilizing a

unique web-based process for rapid RFQ shipment processing, milestone management, and total web visibility for each customer's shipment. The system's configurable reporting capabilities meet or exceed client's needs.

Active Surface Management provides ground carrier management services for time sensitive Truck Load shipments that are the result of peak load capacity variability. As with each of the Active On-Demand operating divisions, it provides competitive pricing and end-to-end milestone visibility. Active Global Solutions features solutions that include ground expedite, air freight, global courier, and next-flight-out cargo services, often times blending these services to maximize value. Active Aero Charter specializes in full aircraft cargo charters; globally; door to door. Since 1998, Active Aero Charter has been North America's largest provider of web-based carrier procurement for cargo charters. All three divisions operate within the proprietary tracking shipment technology, named APT, provided by Active On-Demand.

Active On-Demand draws upon a base of more than 4,000 highly valued and qualified air and ground carriers to transport thousands of shipments monthly throughout North America, Europe and Asia.

The company's contractual clients and customer base include industries ranging from automotive, aerospace, industrial manufacturing, pharmaceuticals, and defense as well as 3rd and 4th Party Logistics providers.

In addition to Active On-Demand, USA Jet Airlines is a wholly owned subsidiary of the Active Aero Group and provides on-demand cargo and passenger services primarily in North America.
